

Configure your conveyor online:

www.easy-conveyors.com

- Step 1 Go to www.easy-conveyors.com
Go to productrange and click on the EASY CAD button
- Step 2 Go to Product & CAD and choose your type of conveyor
- Step 3 Choose your type of conveyor
- Step 4 Choose your model
- Step 5 Choose your cad format and configure your conveyor
- Step 6 Click right below on CAD file or Data sheet,
in a few seconds your CAD drawing or datasheet will be ready at the left side for downloading.
- Step 7 Download your 3D drawing of your designed conveyor

EASY CONVEYORS IS A TOP FLIGHT PRODUCER OF CONVEYOR SYSTEMS SUCH AS BELT CONVEYORS, MAT TOP CONVEYORS, CURVED TRACKS AND ROLLER CONVEYORS.

The Easy Conveyors concept is based on long experience in the development, production and implementation of product transport systems. We have combined this know-how and expertise in a new enterprise aimed at enabling clients in all major industrialized countries to reap the benefits.

The premise continues to be that the production lines must be of modular design so that the best production results can be achieved. We work with functional modules in combination with one another. The most advanced constructional concepts are always used in the engineering of the various modules, so a state-of-the-art product is guaranteed. Besides this, during the design stage we did not lose sight of the production-practical aspects. We have therefore been able to combine advanced technique with efficient production methods.

THE BENEFITS TO YOU ARE OBVIOUS:

you profit from clever products at sharp prices.

The different conveyors are manufactured in such a way that they are simple to install. We are able to make significant savings in carriage costs by sending loose components to our dealers (as well as to clients who wish to self-assemble). These savings also benefit you.

We operate with a network of local dealers who have been fully trained by us. Therefore you will always have a contact point nearby who can help you with advice, technical questions and support. If you would like to know more about our clever conveyor systems and the sharp prices, just look at www.easy-conveyors.com.

Easy Conveyors uses the standard internet technology, allowing you to download our conveyor belt designs in various different formats. Whether you work with AutoCAD, Solid works, Pro-engineer or something else, your designs will reach you in the blink of an eye.

Our belt conveyors is available in 3 sizes;

- ECA 30, with a standard wide from 100 till 400 mm
- ECA 40, with a standard wide from 200 till 600 mm
- ECA 80, with a standard wide from 600 till 1200 mm

The benefits at a glance:

- ECA 30 The aluminium conveyor ECA 30 has a 35 mm return roller making it suitable for transporting small items.
- ECA 40 The aluminium conveyor ECA 40 belts offer a choice of 15 mm and 45 mm return rollers in different configurations. These belts have a higher maximum load capacity, making them the most versatile in application
- ECA 80 The aluminium conveyor ECA 80 belts are the real heavyweights of the range. With a large maximum load capacity, width up to 1200 mm and a maximum length of 16000 mm, this is the belt for heavy duty requirements.
